

FLAG OF IRAN

OFFICIAL STANDARDISED SPECIFICATION

Iran Flag Project – iranflag.org – February 2026

The flag of Iran, the Lion and Sun flag, is defined as a horizontal tricolour of green, white, and red with a gold Lion and Sun emblem in the centre. The flag has an aspect ratio of 4:7, measuring 120 units in height and 210 units in width. Each horizontal band measures 40 units in height.

The Lion and Sun emblem measures 39 units in height and 54 units in width. It is centred horizontally on the flag. Vertically, its lower edge coincides with the lower edge of the white band, leaving a 1-unit gap between its upper edge and the upper edge of the white band. The outer strokes of the emblem are exactly 0.35 units in thickness.

The construction sheet defines the exact design of the emblem. It consists of a gold male lion standing before a rising sun, holding a shamshir in its forepaw and standing on a horizontal base.

The exact colour values for green, gold, and red are specified in the table. Pantone is provided for physical colour reference, hexadecimal for digital use, and CMYK for printing. White is pure white, and black is pure black.

Colour	Green	Gold	Red
Pantone	7739 C	1235 C	485 C
Hex	#319B42	#FFB81C	#DA291C
CMYK	68/0/57/39	0/28/89/0	0/81/87/15

When viewed from the obverse, the green band is at the top, the white band in the middle, and the red band at the bottom, with the hoist on the left. The lion faces towards the hoist. When the flag is reproduced at a non-standard aspect ratio, the emblem remains centred horizontally, with its dimensions and vertical position unchanged.

Original flag files and further information can be found at iranflag.org/specification.
